<i>Bio-Plexus Inc. Registration Number:</i>	1224632

The BIO-PLEXUS™ Needle Disposal Container is a single use, one quart, puncture resistant container comprised of a bucket like base and an affixed cover. The bucket and the cover are plastic injection molded from polypropylene. The cover has three openings and two hinged lids. The BIO-PLEXUS™ Needle Disposal Container performs the same function as other legally marketed sharps containers, for example, the Vacutainer® Needle Disposal Container 367201. Specifically, this is to receive and accumulate contaminated blood collection needles and accessories in a puncture resistant container until final disposal can occur. The BIO-PLEXUS™ Needle Disposal Container is to be used by healthcare workers in healthcare facilities and in the home healthcare setting for the disposal of contaminated **PUNCTUR-GUARD®** needles and accessories.
